

ScoreLock

AI-Driven Football Analytics Platform v0.1.0 — Created by Said Borna

WHAT IT DOES

ScoreLock is a football analytics platform that turns raw match data into contextual, actionable insight. It aggregates fixtures, historical statistics, and bookmaker odds from multiple sources, runs them through a proprietary ML prediction engine trained on thousands of matches across nine European leagues, and enriches every prediction with calibrated probabilities, value bet detection, and real-time news sentiment analysis. The platform then auto-generates original Swedish-language editorial content — match previews, post-match reports, round summaries, and value bet alerts — producing thousands of unique SEO-indexable pages per season. It ships as a full-stack SaaS with subscription tiers, a social tipping league, and integrated affiliate monetisation.

HOW IT'S BUILT

The platform is a vertically integrated system — multi-source data pipeline, ML engine, AI content generator, real-time infrastructure, and consumer frontend — built and operated as a single codebase. Autonomous scheduled tasks handle data synchronisation, daily predictions, model retraining, and content publishing without manual intervention. The architecture is designed for resilience across multiple data providers and for scale toward additional leagues, languages, and sports.

WHY IT EXISTS

The football analytics space is fragmented. Livescore apps deliver data without context. Statistics platforms provide depth without betting insight. Betting sites offer odds designed to profit from the user, not inform them. Legacy tipping media relies on manual, shallow analysis that cannot scale. No single product combines live data, ML-driven predictions, odds analysis, sentiment tracking, and auto-generated editorial content in one platform. ScoreLock was built for this gap: an independent, data-driven analytics layer that gives football enthusiasts and semi-professional bettors the full picture — numbers, context, and narrative — without the bias of a bookmaker behind it.

CURRENT STATE

ScoreLock is in active development with a clear trajectory toward market launch. The core platform is production-stable with the data pipeline, prediction engine, content generator, frontend, affiliate integration, and tipping league fully built. The remaining work centres on distribution, visual polish, and league expansion. The ambition is a fully market-ready product positioned to compete seriously in the Nordic football analytics space, with a sustainable revenue model built on affiliate partnerships and premium subscriptions — designed from day one for scale.
